

Protect Your Transit Mixer
Prevent Repairs And Downtime Through Automated Lubrication

With coverage of up to 34 lubrication points and the addition of "lubed for life" t-joints the Lincoln Quicklub System can reduce replacement part purchases of steering, braking and suspension component and drum rollers by up to 25%. The System additionally reduces downtime and has the potential to cut maintenance time in half.

The system protects critical bearings on the steering, braking, suspension, piston-pumping mechanisms and drum rollers. This increases uptime and keeps the bearings lubricated in a corrosive environment.
